Portfolio: <https://konradyee.github.io/Konrad-Yee-Portfolio/>

OBJECTIVE STATEMENT

I am a passionate third-year civil engineering student with a dedicated focus on structural engineering and project management. Seeking to leverage hands-on design, analysis, and site coordination experience to contribute to innovative infrastructure projects.

EDUCATION

BASc. Civil Engineering, Minor in Business, University of Toronto **Sept 2024 - May 2029 (EXP)**

Relevant Coursework: Steel & Timber Design, Structural Analysis, Construction Management, Solid Mechanics

SKILLS

Skills: Structural Analysis, Building Information Modeling (BIM), Materials Management, Cost Estimation

Engineering Software: AutoCAD, Civil 3D, Revit, SAP2000, ETABS, MicroStation, OpenRoads Designer, ArcGIS

Productivity: PowerBI, Smartsheet, MS Excel, MS Dynamics CRM, MS Teams, Slack

Project Management: Project Coordination, Workflow Optimization, Contractor & Vendor Management

RELEVANT EXPERIENCE

Engineering Project Lead, UofT Engineers in Action **Sept 2025 – Sept 2026**

- Supported the full project lifecycle for a 65.5-meter infrastructure project serving 300 residents, including budgeting and a bill of quantities (BOQ), technical calculations, and documentation.
- Coordinated international field engineers and faculty reviewers to secure Notice-to-Proceed approval for a pedestrian bridge project in Peru.
- Reduced excavation requirements by optimizing abutment design under EIA slope and setback constraints while maintaining structural stability through AutoCAD.

Structural Engineering Intern, Exactus Energy **Jun 2025 – Aug 2025**

- Managed 60+ residential projects end-to-end, coordinating documentation, calculations, and deadlines using Microsoft Office, AutoCAD, and Excel.
- Analyzed structural integrity against regulatory compliance codes (OBC, ASCE, NBC, IBC and IEBC) to determine if roofing was able to withstand extreme weather with solar panel installations.
- Executed geotechnical-structural engineering assessment utilizing QGIS and drone/site visit reporting.
- Improved cross-team coordination and quality assurance through tracking project status and client communications in Dynamics CRM, Excel, and Smart Sheet.

Engineering Intern, Green Infrastructure Partners Inc. **Mar 2023 – Jun 2023**

- Improved data accessibility and operational efficiency by 35% by developing a data reference system with Excel for asphalt pile inventory.
- Organized, analyzed, and presented material inventory for quantity tracking and reporting.
- Performed precise volumetric calculations of asphalt piles, increasing inventory management and decision-making accuracy using Propeller Software and QGIS.
- Authored and standardized worker guides for materials handling, equipment use, and asphalt inventory workflows, reducing new-hire onboarding time by 10%.

ADDITIONAL EXPERIENCE

Exploration Geoscience Analyst, Metalite Resources Inc. **Jun 2026 – Present**

- Modeled geological data and exploration datasets from public databases reprocessing it for trend identification, data quality improvements, and evidence-based decision-making for further junior mining exploration.
- Authored press release documentation including prospecting authority reports for an exploration project in NSW Australia and co-authored Ontario assessment reports for mining claim renewals and annual reporting requirements.
- Conducted rock chip and XRF sampling for mineral exploration, accurate records and documentation to support technical reporting and downstream analysis.
- Improved identification and prioritization of exploration targets by leveraging ArcGIS to develop professional mapping and visualize spatial datasets.

Building Maintenance, Black Creek Co-operative Homes

Jun 2022 – Aug 2022

- Engineered vendor workflows and managed 50+ maintenance work orders, driving contractor performance to achieve 100% on-time repair delivery.
- Optimized process logistics for maintenance and repairs, cutting average response times by 13% and elevating tenant satisfaction.
- Project-managed the rollout of inspection framework, improving task prioritization efficiency and accelerating resolution rates for high-priority repairs.
- Led cross-trade execution across plumbing, electrical, and carpentry projects, leveraging proactive maintenance planning to reduce facility downtime.

PROJECTS

Structural Engineer, Design-Build Competition, Timberfever

Sept 2026

- Collaborated with architecture students to design and build a full scale timber structure capable of withstanding extreme weather conditions.
- Performed structural calculations for extreme weather to evaluate timber members and joints for strength and stability.

Technical Debater, ITE Transportation Challenge

Feb 2026

- Placed 3rd in a competitive transportation technical debate, demonstrating superior verbal communication and the ability to translate complex information under pressure.

Project Lead on Modular Cart, University of St. Michael's College

Jan 2025 – Apr 2025

- Engineered a modular press mobility system in AutoCAD, creating a safe, single-operator workflow that satisfied all client functional requirements.
- Led a 6-person team to evaluate 68+ concepts using Pugh matrices in Excel, selecting an optimal design prioritized for safety and usability.
- Validated a 1,400-lb load capacity through structural analysis and force modeling, ensuring operational safety without sacrificing print precision.
- Managed project timelines using MS Office, driving weekly status updates to achieve 100% on-time delivery under tight deadlines.

Cardboard Structural Chair Design, Project “Ampersand”

Sept 2024 – Jan 2024

- Designed and fabricated a full-scale load-bearing cardboard chair meeting 17” minimum height and 200+ lb design-load requirements without adhesives or fasteners.
- Modeled and optimized the structure in SolidWorks, developing interlocking connections and cut patterns across two 48” × 96” sheets with near-zero material waste.
- Conducted iterative prototyping and load testing, resolving 3+ structural/construction issues and validating capacity to 220 lb in a single test and 150 lb for 30 minutes.
- Applied statics, compression, structural stability, ergonomics, and material optimization to translate design requirements into a functional full-scale structure.

Bridge Design & Structural Analysis Project | Revit, AutoCAD, Excel

Sept 2022 – Dec 2022

- Designed and built a 70 cm arched Warren truss model using popsicle sticks and wood glue, based on a CAD model with fixed node constraints.
- Simulated a truss model with a design cost of \$172,000 and scaled the model for fabrication.
- Reinforced critical stress points via lamination and cross-bracing; load-tested the bridge, which supported 30 lbs with a total structure weight of 58 g and an efficiency ratio of 234.6 times the weight of the structure.
- Analyzed failure modes and proposed design improvements to increase tensile strength in high-stress regions.
